Saskatchewan Health Dental Plan

Serving Saskatchewan Children for Ten Years

#### **Annual Report** 1983-84

Saskatchewan Health
Dental Plan
Tenth Year of Operation
September 1, 1983 to
August 31, 1984

Graham Taylor Minister of Health

#### Saskatchewan Health

#### To the Honourable F. W. Johnson Lieutenant Governor of Saskatchewan

May It Please Your Honour:

I am pleased to present the Report of the Dental Plan for the year ending August 31, 1984.

Respectfully submitted,

Graham Taylor, Minister of Health.

Walter Podiluk Deputy Minister of Health

#### Saskatchewan Health

#### To the Honourable Graham Taylor Minister of Health

Sir:

I have the honour to present herewith for your consideration the Report of the Dental Plan for the year ending August 31, 1984.

Respectfully submitted,

Walter Podiluk, Deputy Minister.

G. H. Loewen Associate Deputy Minister of Health

M. H. Lewis, D.D.S. Executive Director Saskatchewan Health Dental Plan

#### **Background**

In 1968, the Saskatchewan Department of Health conducted surveys in Regina and Saskatoon which showed that the level of dental health of children in these cities was far from satisfactory. On the basis of the survey results, the Dental Division of the Department of Health proposed that the federal government allocate funds for a dental pilot project in the province. The project was to provide dental health education, preventive services and treatment services to children through a dental team consisting of a dentist, two dental therapists (formerly called dental nurses), three dental assistants and one receptionist recorder.

The dental therapists were formally trained to provide educational, preventive and treatment services to children, including deciduous (baby) tooth extractions and amalgam and composite restorations (silver and tooth-colored fillings) in deciduous and permanent teeth. The three dental assistants were formally trained to provide chairside assistance, simple prophylaxis (cleaning) and topical fluoride.

Services were made available to children from 3 to 12 years of age in the Oxbow area of Southeastern Saskatchewan. The dental team was housed in a mobile clinic equipped with four dental units, an X-ray machine, a laboratory and a reception room. The project lasted for three years. It demonstrated that high quality care could be provided by such a program and also that parents were prepared to enroll their children in a dental program in which care was provided by dental therapists. It was important to establish that a dental program making use of dental therapists could be successful because one of the main reasons for testing such a program was the chronic shortage of dentists in the province, especially in the rural areas.

On the basis of the successful Oxbow project, the Government of Saskatchewan announced in March 1972 that a province-wide, school-based dental program would be established to provide comprehensive dental care to children between the ages of three and twelve. The program commenced in September 1974. With the cooperation of the Department of Education and local school boards, dental clinics have been located in schools to make access more convenient for children and parents.

Children have been enrolled as follows:

<b>Enrollment Date</b>	Year of Birth
September 1974	1968
September 1975	1969, 1970
September 1976	1967, 1971
September 1977	1972
February 1978	1973
September 1978	1966, 1974
September 1979	1975
September 1980	1976
September 1981	1977
September 1983	1978

In April 1980 the Department of Health decided that an independent review of the Saskatchewan Dental Plan should be undertaken. Arrangements were made for Dr. D. W. Lewis, Professor and Head of Community Dentistry, University of Toronto, to conduct a thorough statistical evaluation of the first six years of operation of the Saskatchewan Dental Plan.

The report indicated that although the ultimate test of the Saskatchewan Dental Plan will be how it improves the oral health status of the people of Saskatchewan in the long run, the performance to date gives early indications of the likely achievement of this long term goal.

Health Region No. 1 in Swift Current had a Dental Program for almost 30 years. The program had been modified to avoid duplication of the Saskatchewan Dental Plan. The Swift Current Regional Health Board provided services to those resident children and adolescents up to and including 18 years of age who were either too young or too old for enrollment in the Saskatchewan Dental Plan.

With only four age groups remaining it was not economical for this program to continue.

Negotiations to absorb the Swift Current Health Region Dental Program were completed in 1981 and resulted in young people who were Swift Current Health Region residents and born in the years 1963 to 1965 and 1978 becoming eligible for enrollment in the Saskatchewan Dental Plan.

On April 1, 1982 the Saskatchewan Dental Plan assumed responsibility on behalf of the Medical Services Division, for the administration of Supplementary Health Benefits Dental Program.

#### **Organization and Administration**

#### Legislative and Regulatory Authority

The Dental Care Act gives the Department of Health authority to operate a dental care program. The act authorizes the Minister to enter into agreements with or to employ dentists, dental therapists and certified dental assistants and do such other things as are necessary for the establishment and operation of the dental care program.

The Saskatchewan Dental Nurses Act, (1973) created a Saskatchewan Dental Nurses Board to establish and maintain rules for the registration and licensing of dental nurses, to set standards of professional conduct for dental nurses, to advise the Minister of Health on matters referred to the Board and to ensure the regulations and standards of professional conduct were met by all registrants. The first Board was appointed on September 25, 1973.

The Saskatchewan Dental Nurses Act was rescinded and was replaced by The Dental Therapists Act in 1981. This Act established The Saskatchewan Dental Therapists Association, changed the name "dental nurse" to "dental therapist" and replaced the Saskatchewan Dental Nurses Board with the Saskatchewan Dental Therapists Council.

The Saskatchewan Dental Therapists Council establishes and maintains rules governing the registration and licensing of dental therapists and sets standards of professional conduct. The Council also ensures that the regulations and standards of professional conduct are met by all registered dental therapists.

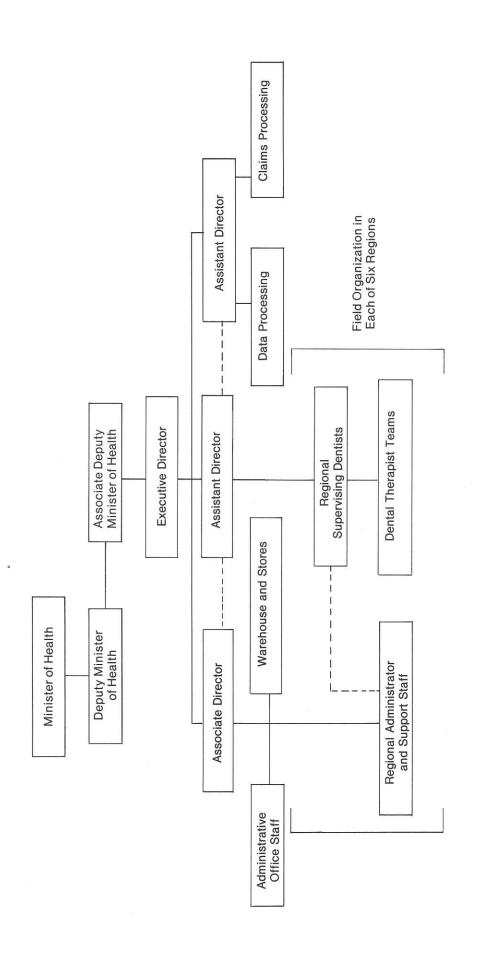

#### **Administrative Structure**

The administrative organization is outlined in the organizational chart on page 6. The Saskatchewan Dental Plan is administered through a central headquarters staff, administrative staff, warehouse and stores personnel. The province is divided into six administrative regions. Regional headquarters are located in Swift Current, Regina, Saskatoon, Yorkton, Prince Albert and North Battleford.<sup>1</sup>

On September 1, 1983 the Humboldt and Wakaw Rural School Units were transferred from the Prince Albert Dental Region into the Saskatoon Dental Region. This change in caseload resulted in a more efficient operation of the Dental Plan in this area.

The Saskatchewan Dental Plan does not provide coverage to children and adolescents in the northern part of the province. The Northern Health Services Branch operates its own dental plan for children and adolescents. However, the Saskatchewan Dental Plan provides Northern Health Services Branch with consultation, dental equipment technician services and supplies from the Dental Plan Central Warehouse.

<sup>&</sup>lt;sup>1</sup> The six Dental Plan Administrative Regions and headquarter locations are shown on the map on page 7.

#### **Profile of Dental Plan Personnel**

#### **Clinical Personnel**

#### 1. Supervising Dentist

The supervising dentist performs a variety of duties in close cooperation with approximately eight dental therapist teams. Each team consists of one dental therapist and one certified dental assistant. The dentist spends a great deal of time examining and formulating treatment plans for enrolled children and adolescents. The dentist carries out services which are beyond the scope of the dental therapist. Lines of communication are always open between the team and the dentist in order to provide the team with immediate consultation or assistance when necessary. As supervisor, the dentist monitors the quality and quantity of work being performed by the teams. To do this, the dentist examines selected patients from each team annually using established criteria. The dentist also sees that priorities and schedules are being arranged and met.

Meeting frequently with parents, superintendents, principals, teachers and local officials, the dentist plays a significant role in public relations. All field staff are essentially public relations officers but it is the supervising dentist, together with the regional administrator, who must assess and deal with the specific difficulties and judge public sentiment.

#### 2. Dental Therapist

The Saskatchewan Dental Therapist is a graduate of a two-year training course. Students in this course learn to diagnose tooth decay and to restore permanent and baby teeth with silver amalgam and composite resin filling materials. Dental therapists are trained to place stainless steel crowns and space maintainers and to perform pulpotomies (nerve treatments) and extractions on baby teeth. Considerable emphasis in their training is placed on the prevention of dental disease.

Most practising dental therapists in Saskatchewan are employed by the Saskatchewan Dental Plan. Other employers include various provincial and federal government agencies and dentists in private practice.

In the Dental Plan the dental therapist, with the aid of an assistant, provides the majority of preventive and restorative treatment required by Dental Plan patients.

#### 3. Dental Therapist/Hygienist

Wascana Institute provides a unique dental hygiene training program. The program is specifically designed for graduate dental therapists. Dental therapists receive approximately 7 months training and obtain the skills necessary to be qualified dental hygienists. The program is accredited by the Canadian Dental Association Council on Education.

Working with a dental assistant, the dental therapist/hygienist provides preventive services, treatment services and staff education aimed at the prevention and treatment of periodontal disease.

In addition, the dental therapist/hygienist spends some time providing the traditional restorative and preventive services of a dental therapist.

#### 4. Certified Dental Assistant

Certified dental assistants, who are graduates of a one-year course, play a dual role within the dental team. They perform many chairside duties for the dentist and therapist, such as instrument transfer, suctioning, retraction, preparation of restorative materials and sterilization.

In addition they take radiographs, clean and polish teeth, apply topical fluorides, place sealants and provide oral hygiene instruction.

#### **Non-Clinical Personnel**

#### 1. Regional Administrator

Regional administrators maintain records on personnel, equipment, materials, supplies and services. They work in close cooperation with supervising dentists in assigning service areas for dental therapist teams.

Regional administrators are responsible for identifying locations for dental clinics, monitoring program progress, identifying operational problems and initiating corrective action. They share with the supervising dentists, responsibility for public relations in the region and deal with specific difficulties affecting parents, staff and members of the public.

#### 2. Equipment Technician

The equipment technician is experienced in instrument technology and repair of dental equipment. He installs, repairs and maintains all dental equipment within the region.

Preventive maintenance is practised by all staff under the guidance of the equipment technician. This maintenance eliminates a great deal of lost time because of malfunctioning dental equipment. The equipment technicians regularly visit the dental clinics and are therefore involved in considerable travel.

The supervising equipment technician provides technical guidance and on-the-job training to technicians and also undertakes some of the more complex repairs requiring specialized shop instruments and tools.

#### **Organization of Delivery of Dental Services**

#### **Dental Facilities**

The Dental Plan uses a team approach to provide dental services in the school setting. Most of the work provided by the dental teams is performed in one-chair permanent dental clinics. The dental clinics situated in schools have many advantages over clinics located outside the school setting. Some of the advantages are better coordination with school activities, keeping children within the familiar surroundings of their own school, minimal class disruption and a minimum of working time lost by dental teams because of missed appointments or having to transport patients.

As of August 31, 1984 there were 549 permanent clinics located in schools throughout Saskatchewan (Appendix 1 lists dental clinics alphabetically by region). Permanent dental clinics, where possible, consist of a bright well-painted room of approximately 23 square metres, often with an adjoining waiting room and washroom. Most have overhead fluorescent lighting, a ventilation fan and an adequate number of electrical utility outlets. Each clinic has a lockable cupboard with a stainless steel sink and counter work areas. Located in the school, as close as possible to the clinic, is a large fixed air compressor.

A permanent dental clinic is furnished with a motorized dental chair with an attached light, operator and assistant stools, mobile dental cabinet, mobile dental cart, sterilizing equipment, amalgamator, brackets to accommodate a portable x-ray machine and portable lead shielding. All hand instruments are carried from clinic to clinic by the dental teams.

#### **Patient Care**

#### 1. Children's Dental Care

The majority of patient care in the Dental Plan is provided in schools using a team approach.

Each team consists of a dental therapist and a certified dental assistant. Associated with each dental therapist team is a supervising dentist who works in close conjunction with about eight teams. In each region there are regional support staff including a regional administrator, an equipment technician and clerical workers.

A great deal of preliminary work within each dental region in developing schedules is undertaken to ensure that a timetable can be developed to provide dental care to all enrolled children with as little disruption to the school as possible. School principals are contacted to discuss suitable times for the teams to visit their schools and to inform them of the number of children enrolled in their particular area. The dental therapist team explains the operation of the Dental Plan to the school staff involved and discusses the schedule within each particular school. To promote continuity, dental teams attempt to schedule their work in a school at the same time each year.

A few days before the child's initial visit to the dental clinic parents are contacted by phone or letter. On the first clinic visit, the child's medical history is checked to see if there are any medical conditions which might affect the provision of dental care. A simple examination of the child's mouth is performed to determine if diagnostic x-rays are required. Any required radiographs are taken and processed.

During the second visit, the dentist or dental therapist gives the child a full clinical examination. A treatment plan is written to suit the individual preventive and restorative needs of the child. Parents are encouraged to be present for this visit so that the pertinent diagnostic findings and treatment planning can be discussed directly with them. At this time, diet and oral hygiene are also discussed with the parent and child. The prevention of dental disease is of great importance, and the dental teams stress preventive measures with the parents and children throughout the course of treatment.

Except for emergencies and urgent problems, the actual dental treatment usually commences at the third clinical session. A dental therapist and certified dental assistant carry out treatment in accordance with the treatment plan. As treatment progresses, any necessary modifications in the treatment plan are made in consultation with the supervising dentist. Dental teams are encouraged to perform quadrant dentistry, so that all necessary treatment in any quarter of the mouth is performed during one visit. Most restorative treatment is performed with the use of rubber dam, a technique which provides improved visibility and control of the operating field for the dental therapist and comfort and protection of the patient.

Referrals to private practitioners are written for specific dental treatment. Private practitioners may also provide emergency services to enrolled children.

#### 2. Adolescent Dental Care

Young people enrolled in the Saskatchewan Dental Plan have been receiving dental care primarily in school dental clinics. Upon leaving school they will be responsible for their own dental health and will need to seek care from a dentist in private practice. A bridging program has been developed in cooperation with the College of Dental Surgeons of Saskatchewan to encourage young people to make this transition. The program provides for a number of adolescents 14 years and over who are enrolled in the Dental Plan to receive care in private dental offices.

The Department of Health has an agreement with the College of Dental Surgeons of Saskatchewan to make a capitation payment to the College for each young person making one or more visits to a participating dentist. In turn an agreement between the College and participating dental practitioners allows dentists to be paid on a fee-for-service basis in accordance with a payment schedule established by the College for this program. All covered services are provided at no charge to the parents. This agreement specifies that dentists will make every effort to ensure the participation of these patients.

In order to provide dental services, schools with grades 9, 10 and 11 are designated as either Dental Plan schools or private practice schools. In Dental Plan schools care is provided by Dental Plan staff in school clinics. In private practice schools dental care is provided in the office of a participating dentist of the parent's choice. All schools assigned to private practice are within fifty kilometers driving distance of a participating dentist. During the past year, of all adolescents assigned to private practice dentists 81.9% born in 1967, 78.1% born in 1968, and 67.2% born in 1969 received care from private practitioners.

The agreement between the College of Dental Surgeons and the Department of Health also specifies that a Quality Assurance Committee will be established. It assesses and makes recommendations about the quality of care provided to young people in both dental clinics and dental offices. This committee consists of a dentist from private practice, a dentist from the College of Dentistry, University of Saskatchewan, and a dentist from the Dental Plan. The committee has established criteria for the evaluation of dental care. Each school year members of the committee visit a number of schools in the province and examine young people who have been treated in the program. The committee sees examples of dental care provided by dentists participating in the adolescent dental program and by dental therapists in school dental clinics. The committee reports its findings regularly to the College of Dental Surgeons of Saskachewan and the Department of Health.

Statistical highlights of the 1983-84 year of operation of the adolescent program are presented in Tables 1A-1C.

Table 1A

#### **Dental Health Promotion**

Dental Plan staff are continually involved in community dental health education and promotion activities. Staff frequently participate in community and school association meetings, prenatal class presentations, career days, school open house activities, shopping mall displays and health fairs. Many dental teams also provide dental health instruction in the classroom. These activities are intended to promote dental health and to make current dental health information available to the public.

In 1983, a periodontal survey was conducted to gather information about gum disease in Saskatchewan adolescents. The results showed that although gum irritation, soft debris and limited hard deposits were prevalent amongst the adolescents surveyed, the majority of these conditions were found to be in the early stages. The findings of this survey emphasize the importance of education, prevention and early treatment of gum disease in Saskatchewan's adolescent population.

#### **Preventive Programs**

The Dental Plan strives to offer the most effective and practical measures available to reduce the incidence of dental disease. To help accomplish this objective, the position of Dental Health Educator has been established. This person is responsible for planning, implementing and evaluating prevention and research projects within the Dental Plan, training Dental Plan staff in prevention-related activities, developing and coordinating health education materials, and acting as a resource person for Dental Plan staff. In this way, prevention activities are coordinated centrally within the Dental Plan.

An individual approach to prevention is used within the dental clinic. When indicated, children and adolescents enrolled in the Dental Plan receive individual oral hygiene and nutritional instruction, as well as topical applications of fluoride. An attempt is made by the dental teams to identify and concentrate their efforts on those children and adolescents with a high risk for dental disease.

Tooth sealants are being applied to selected children's teeth on a trial basis. Tooth decay commonly occurs on the chewing surfaces of teeth. Sealants have been shown to be both safe and effective in preventing decay on these surfaces.

The application procedure is simple. The chewing surface of a permanent molar or pre-molar is cleaned and treated with a mild conditioning solution which allows the sealant to stick to the tooth. The plastic sealant material is then applied to the grooves of the tooth. Approximately 100,000 fissure sealants were placed on permanent teeth.

Many schools in each region are participating in fluoride mouthrinse programs with the approval of the local school board and school personnel. The fluoride mouthrinse procedure is a safe and economical way to prevent tooth decay and requires little classroom time. Every week, under supervision, the students rinse with a 0.2% neutral sodium fluoride solution for one minute, and then return the solution to a paper cup for proper disposal. Studies show that fluoride rinsing reduces tooth decay by about 35%. This procedure is entirely voluntary and without cost to parents.

As of June 1984 more than 9,500 students were participants in fluoride mouthrinse programs. A list of the participating schools by region follows.

#### **Continuing Education**

Continuing education is encouraged for all staff in the Dental Plan. Supervising dentists work with individual dental teams and groups of teams presenting and reviewing dental techniques. Each dental region meets several times a year. Normally a portion of each meeting is set aside for continuing education. Topics include reviews of clinical procedures, patient management and communication skills.

This year selected dental therapists and assistants from each region attended a continuing education course with supervising dentists, regional administrators and head office staff. Raymond Croucher of Cambridge University presented his award winning dental prevention program for adolescents, "Natural Nashers". Mavis Kyle, Associate Dean of the University of Saskatchewan, School of Nursing, gave a workshop entitled, "Supervisory and Communication Skills for Health Professionals". The supervising dentists attended a course presented by Drs. Matthews and Hastings of Wascana Institute. They reviewed the techniques dental therapists are currently being taught. Dr. David Singer, University of Saskatchewan, School of Dentistry, presented "Rapidly Progressing Juvenile Periodontitis, Its Early Identification and Treatment".

Many staff members received support for attending courses and meetings presented by other organizations in the province such as the Dental Therapists Association, the College of Dental Surgeons of Saskatchewan and the University of Saskatchewan.

A number of dentists in the Dental Plan attended management courses sponsored by the Department of Health and the Public Service Commission.

#### **Other Activities**

In addition to the major responsibility of improving the level of dental health of children and adolescents in the province, the Saskatchewan Dental Plan is involved in other dental activities. The Dental Plan provides consultation on provincial dental matters to other agencies such as the Northern Health Services Branch, Community Health Services Branch, Medical Care Insurance Commission and the Federal Government.

The Dental Plan administers the Supplementary Health Benefits Dental Program. In this capacity the Dental Plan summarizes unusual claims for review by the Dental Advisory Board and processes approved claims for payment. Details are provided in Appendix 2.

The College of Dentistry at the University of Saskatchewan and the Dental Plan work together to provide students and new graduates an opportunity to gain first hand knowledge of the Dental Plan. As well as encouraging graduates to consider a career as a supervising dentist with the Dental Plan, the knowledge gained from this experience helps build a positive working relationship between those graduates entering private practice in the province and the Dental Plan. College of Dentistry students at the University of Saskatchewan have an opportunity to learn about the Dental Plan through class discussions in which Dental Plan staff participate, by visits to Dental Plan clinics and by working in a Dental Plan clinic during a portion of their fifth year of training.

One dental student was employed by the Dental Plan in Regina during July and August in the dental claims and assessments section.

The Dental Plan also offers part-time employment to recent graduates of the College of Dentistry, University of Saskatchewan. Three recent graduates provided dental care on a part-time basis to children and adolescents attending Dental Plan clinics. These dentists become familiar with the Dental Plan and gain experience in providing dental care to children and adolescents.

The Dental Plan and the College of Dental Surgeons participate in a summer externship program. This program provides fifth year dental students at the University of Saskatchewan with an opportunity to gain experience in providing preventive and treatment procedures in a rural dental practice setting under the guidance of a private practitioner. The Dental Plan provided a grant to the College of Dental Surgeons of \$800.00 per student per month for 8 students who worked a total of 23 months. This grant was paid to the private practitioner who in turn paid the student a salary of \$1,600.00 a month.

<sup>1</sup> Enrollment figures include those adolescents eligible for treatment by private practice dentists in the adolescent dental program.

<sup>&</sup>lt;sup>2</sup> Enrollment figures for Registered Indians are reported separately. Because of a number of circumstances unique to that group of children and adolescents, their participation in the Dental Plan is markedly lower than that of other eligible children (see Table 3).

#### **Dental Health of Enrolled Children and Adolescents**

Every child and adolescent enrolled in the Dental Plan is examined once a year. This is a thorough examination with a dental light, mirror, explorer and air to dry the teeth. X-rays may be used to detect cavities between the teeth that cannot be seen otherwise.

Children in the province experience considerable tooth decay at a young age. It can be seen in Table 4A that the average five year old had 2.20 decayed deciduous (baby) teeth.

Table 4B shows a dramatic improvement in the number of decayed, missing and filled permanent teeth for individual age groups from the 1974-75 program year to the 1983-84 program year.

Figure 4 reflects the improvement of dental health of six year old children during the ten years the Dental Plan has been in operation.

The total number of decayed, missing and filled permanent and baby teeth for six year old children, as shown in Figure 4, has declined from 6.5 in 1974-75 to 3.6 in 1983-84. It should be noted that in addition to an overall reduction in the total there has been a significant change from the major category being decayed teeth for six year olds in 1974-75 to the major category being filled teeth for six year old children in 1983-84.

# Services Provided to Enrolled Children and Adolescents

All services provided by Dental Plan staff are recorded, for statistical purposes, in a data information system in addition to the customary patient service record. The volume of services provided by Dental Plan staff and private dental

practitioners during the 1983-84 program year is shown, by age of patient, in table 5. Comparisons with the volume of service provided in previous years may be made by referring to previous reports.

1 Includes services to enrolled registered Indians.

<sup>&</sup>lt;sup>2</sup> Group instruction on dental health was provided to children in 1,483 classrooms. Individual records were not maintained by year of birth.

#### **Referred and Emergency Services**

The costs of services provided by private practitioners to children and adolescents enrolled in the Dental Plan are covered in three areas: referred services, emergency services and services provided in the adolescent dental program.

Referrals for children and adolescents to private practitioners are of two types. A general referral is given to a patient when the examining dentist feels that the management of the patient is beyond the capability of the dental therapist. Into the category of patient management fall individuals with such problems as mental or physical handicaps and medical or emotional problems. Dental Plan dentists are qualified to deal with such situations, but intensive treatment of special cases is not their primary role in the Plan. Rather, their role is to examine all enrolled children and to supervise the treatment. It is therefore considered preferable to refer children requiring extensive management to a private practitioner, who can devote more time to them and provide more intensive care.

Enrolled children and adolescents are also given referrals to private practitioners for specific dental problems beyond the capability of the dental therapist. Into this category fall such services as treatment of minor orthodontic problems and extensive surgical procedures.

Private practitioners also provide emergency services to enrolled children and adolescents. Emergency services are defined as the relief of pain, treatment of infections, or control of haemorrhage. In emergency cases, the patient does not need to be referred by a Dental Plan dentist in order for service costs to be covered.

In addition, in 1983-84 four private practitioners provided dental care to enrolled children and adolescents on a contract basis.

The following table outlines the types and costs of referred and emergency services provided by private practitioners to children and adolescents enrolled in the Saskatchewan Dental Plan in 1983-84.

Table 6

### Referred and Emergency Services Provided By Private Practice Dentists to Children and Adolescents Enrolled in the Dental Plan<sup>1</sup>

#### September, 1983 - August, 1984

	Referred		Emergen	су	Total	
Type of Service	No.	Cost (\$)	No.	Cost (\$)	No.	Cost (\$)
Total	10,827	280,325.80	2,304	52,183.86	13,131	324,808.13

Other miscellaneous services	1,617	32,195.55	452	8,645.61	2,069	40,841.16
Other services unidentified		(I <del></del> )	-	_	_	(7,701.53)

<sup>1</sup> In addition to the above expenditures, the following costs were incurred:

<sup>(</sup>a) \$2,248,583.64 in capitation payments were made to the College of Dental Surgeons for services provided to 24,535 adolescents who received routine dental care from private practice dentists;

<sup>(</sup>b) \$96,046.03 was paid to four private practitioners working on a contract basis to provide dental care to enrolled children and adolescents.

Therefore these expenditures amount to \$2,669,437.80. (See Statement 1)

#### **Expenditures**

In a review of the following financial statements, certain points should be noted:

1. The financial statements reflect all expenditures incurred directly by the Dental Plan. The statements include certain expenditures which apply to activities other than the provision of dental care to enrolled persons. However, costs related to the Dental Plan which were incurred by other agencies are excluded.

2. Revenue from Dental Plan activities is not applied to offset expenditures. Total revenue of \$1,594,947.96 realized during the year includes:

(a)	Department of National Health and Welfare — enrolled Indian children		
	and adolescents	\$6	612,349.12
(b)	Department of National Health and		
	Welfare — Canada Assistance Plan	\$9	960,093.90
(c)	Province of Alberta — preventive		
	services in Lloydminster	\$	11,180.00
(d)	Other miscellaneous and casual		
	revenues	\$	11,324.94

Total of all expenditures	\$15,776,711.94	\$17,826,029.38

<sup>&</sup>lt;sup>1</sup> Actual expenditure for the five month period April 1, 1983 to August 31, 1983 only. Previous expenditures were reported by Medical Services Division, Department of Health.

#### Statement 2

# **Expenditure Statement Reconciliation to Public Accounts**<sup>1</sup>

	Public Accounts	Program Year
Expenditure Sept. 1/81 — March 31/82	not applicable <sup>2</sup>	\$ 7,896,199.69
Expenditure April 1/82 — August 31/82	\$ 5,885,744.09	5,885,744.09
Total Expenditure 1981-82 Program Year		\$13,781,943.78
Expenditure Sept. 1/82 - March 31/83	8,617,521.86	\$ 8,617,521.86
Public Accounts 1982-83	\$14,503,265.95	
Expenditure April 1/83 — August 31/83	\$ 7,159,190.08	7,159,190.08
Total Expenditure 1982-83 Program Year		\$15,776,711.94
Expenditure Sept. 1/83 — March 31/84	11,076,236.68	\$11,076,236.68
Public Accounts 1983-84	\$18,235,426.76	
Expenditure April 1/84 — August 31/84		6,749,792.703
Total Expenditure 1983-84 Program Year		\$17,826,029.38

<sup>&</sup>lt;sup>1</sup> This reconciliation is included because the Saskatchewan Dental Plan operates on a school year (begins September 1) rather than on the Government fiscal year (begins April 1).

<sup>&</sup>lt;sup>2</sup> The figures for this period apply to the fiscal year 1981-82 and have been reported in previous reports. The figure is not reported here to avoid confusion.

<sup>&</sup>lt;sup>3</sup> These figures, obtained from the Department of Finance monthly expenditure statements relating to the Saskatchewan Dental Plan, will be included in the Public Accounts for the 1984-85 fiscal year.

#### Statement 3

# Adjustment to Cash Expenditure Statements Shown in Statement 1 to Determine Actual Cost of Services Rendered to Enrolled Children and Adolescents

	Program Year September 1/	82 - August 31/83	Program Year September 1/8	3 - August 31/84
<b>Total Operating Expenditure</b>				
(from statement 1)	\$561,024.19 (563,570.93) 49,196.16 (53,077.94)	\$14,524,266.03	\$563,570.93 (407,161.96) 53,077.94 (32,229.15)	\$15,120,843.72
Summer Dental Externship Program <sup>1</sup> Less cost of providing certain dental services to Lloydminster, Alberta <sup>2</sup>	(12,800.00)		(25,800.00) (8,313.32)	
Sub total		\$14,505,037.51 163,829.69 26,225.50		\$15,263,988.16 139,625.80 <sup>3</sup> 20,980.40 <sup>4</sup>
Actual cost of services		\$14,695,092.70		\$15,424,594.36
Number of enrolled children and adolescents		159,946 \$ 91.88		161,784 \$ 95.34

<sup>&</sup>lt;sup>1</sup> Grant for students in the College of Dentistry, University of Saskatchewan, serving a dental externship with private practice dentists in rural Saskatchewan.

<sup>&</sup>lt;sup>2</sup> Costs incurred for providing certain dental health education and preventive services to children resident in Alberta, who attend school in Lloydminster, under an agreement with the Province of Alberta.

<sup>3</sup> Opening inventory of depreciated fixed assets (\$1,092,197.91 — \$163,829.69).	\$	928,368.22
Add purchases during year		2,470.44
Undepreciated fixed assets	\$	930,838.66
Depreciation calculated at 15% of undepreciated value of fixed assets	\$	139,625.80
<sup>4</sup> Costs incurred for rewrite of the data processing system (\$131,127.49 — \$26,225.50)	\$	104,901.99
Add costs incurred during year	_	0.00
Unamortized value of system	\$	104,901.99
Amortization calculated at 20% of unamortized value of system	\$	20,980.40

<sup>&</sup>lt;sup>5</sup> Calculated by dividing the actual cost of services by the number of children and adolescents enrolled.

Note: The Department of Education covers the cost of establishing dental clinics in schools. These expenditures are capital in nature and should be amortized over the life of the facility.

in nature and should be amortized over the life of the facility.	
Opening inventory of approved dental clinics (\$3,936,007.80 - \$853,811.90)	\$3,082,195.90
Add approved dental clinics from September 1/83 to August 31/84	\$ 496,327.00
Undepreciated dental clinics	\$3,578,522.90
Depreciation calculated at 5% of undepreciated value of dental clinics	\$ 178,926.15

This would represent an average cost per enrolled child of:  $\frac{$178,926.15}{161.794} = $1.11$

#### Appendix 2

#### **Supplementary Health Benefits**

#### **Dental Program**

The cost of services provided by private dental practitioners to persons covered by the Supplementary Health Benefits program for social assistance recipients is administered by the Dental Plan.

The following table outlines the costs and types of dental services provided by private practitioners to individuals covered by this program in 1983-1984.

Dentits Services:         Cost           Examination — standard         8,713         \$ 125,760.35           Examination — proshodontic         243         2,399.55           Periapical X-ray — one film         2,293         22,987.00           Periapical X-ray — three films         531         1,411         11,892.90           Periapical X-ray — three films         531         9,996.55           Periapical X-ray — three films         491         11,698.80           Periapical X-ray — films         491         11,698.80           Periapical X-ray — films         491         11,698.80           Periapical X-ray — film         40         587.10           Bitewing X-ray — one film         40         587.10           Bitewing X-ray — one film         92         929.35           Study model         31         542.50           Prophylaxis — child under 5         162         2,839.25           Study model         31         542.50           Prophylaxis — child under 5         126         1,106.10           Scaling and polishing — patient 17 or over         5,249         182,343.28           Topical fluoride — child under 5         48         561.35           Caries control         389         2,811.9		Sept. 1/83-Aug. 31/84 Number of
