

Canadian Oral Health Framework

The Canadian Oral Health Framework 2013-18 (COHF) is the second national oral health Framework produced by the Federal, Provincial and Territorial Dental Working Group. It follows The Canadian Oral Health Strategy (COHS), 2005-10 during which time considerable progress was made and significant goals accomplished – most notably the creation of the Office of the Chief Dental Officer, a national report on oral health status (Canadian Health Measures Survey) and coordination of national recommendations for preventive interventions (e.g. water fluoridation, toothpaste use, fluoriderinses).
